

Building Your Website

Options are... [Build Your Website Yourself with SiteStudio...](#) or [Choose a Custom Design](#)

Simply the most powerful website builder software.

Our SiteStudio web publishing tool leads the Do-It-Yourself website builder industry, millions of SiteStudio websites have been published all over the world.

For customers who want to create a website on their own, no other tool comes close to SiteStudio's simplicity, flexibility and breadth of features.

The clients say that SiteStudio is simply the most powerful website builder software available.

Site Studio Overview: [Web Building Tutorials...](#)

Site Studio is a DIY feature that will allow you to create as many websites as you would like. It is integrated into our hosting Control Panel and so you can use it simultaneously while working inside the Control Panel, without the need of any 3rd party software or any additional restrictive conditions.

Your website can go live in about 10 minutes. No technical knowledge or special skills are required! Explore our rich database of over 70 business-oriented templates in different color schemes.

Site Studio Features:

Simple to use: SiteStudio guides the user step-by-step, providing simple choices with regards to color, style, and images. There is no software to buy and no code to learn. In addition, there is no need to mess around with programs such as FTP or Telnet.

Content and Design Separation: The content of the website(s) is stored separately from the layout. This way, you can completely change the look of your website(s) with just six clicks of the mouse, without ever having to retype any information.

Complete control over color schemes: SiteStudio includes a number of built-in color combinations that look great with any layout. But if you want to add a little originality to your site by changing the colors, use a point-and-click color picker or, for even more control, type in the color as a hex number.

Layout templates: The layout of the site(s) is controlled by layout templates. These are created in HTML, enhanced by a few additional tags for generating images. SiteStudio comes with 71 layout templates, the Personal category sharing 21 layouts and the Small Business category - 50 layouts. More layouts are added with every new version of SiteStudio. You may want to create additional layouts on your own or request them from us.

On-the-fly image generation: SiteStudio dynamically generates the images it needs for each website design, so each time you decide to change the color combination for a given page, the layout, or just a button caption, the necessary image is automatically created.

You need not ever bother with complex and expensive programs such as Photoshop to create websites with clean and professional-looking graphics: our designers have already done that for you!

User-uploaded images: Thanks to the Image Uploader, you will be able to transfer images to your online account without ever having to leave your browser. These images can be incorporated into page content or even page design. You can create an online photo album or insert a personal picture to make it a seamless part of the page logo.

Variety of pages: SiteStudio can be used to make many different pages. You can create an online resume or build a personal photo album.

Everything is done in a simple step-by-step process that is easy to learn and to follow. And because pages are template-driven, you can add your own custom page types or request pages with specific functionality from us.

You can see the list of available templates.

One-click publishing: Your website(s) is published with one easy click. But even after it has been published, you can go back and change it as much as you wish. By clicking on the "Publish" button again, you will instantly upload all the changes that you have made to the "live" version of the site.

Persistence: All your information is saved the moment it is entered. If you decide to log out, you can come back and continue building your website from where you left off.

Complete control over the website: With the use of Site Studio's provided settings, you can make unique and attractive websites. SiteStudio provides the advanced user an option to change buttons on the site.

Advanced full screen text/HTML Rich Editor: Browser-based text editor for Internet Explorer for Windows users only. It empowers SiteStudio users to work with formatting, styles, tables, bullets and more. The Rich Editor allows copying and pasting the most complex tables from a web browser or from any Office application.
